

REIBEL / **BELPOWER**

REIBEL SA – Belpower division extends its exclusively green energy supply services to Flemish households and SMEs

- competitive pricing policy;
- high quality service with guaranteed transparency;
- energy from renewable sources only.

Brussels, January 14th 2008. Electricity provider Belpower, the energy branch of the Reibel Group, finalises the contracts providing access to the distribution networks and will soon start offering its services to the companies and households of Flanders.

Since it obtained a supply licence from the Flemish regulator VREG three months ago, this administrative formality was the last hurdle for Reibel before being able to offer its services directly to potential customers in the north of the country.

All of Belgium will now be covered. In October 2007 the company started its operations in Wallonia and the Brussels-Capital Region, where it already convinced **several hundreds** of customers to sign up for electricity supply contracts that are both attractive and ethical.

Belpower/Reibel boasts an attractive overall package with competitive rates, high quality service and a product that is guaranteed to stem from renewable sources.

The energy, which is produced by the provider itself in its own stations or supplied by foreign partners, comes from green sources only: photovoltaic solar, hydraulic, wind, biomass or cogeneration energy.

The registration form can be downloaded or completed online at www.belpower.be from 11/02/08.

REIBEL S.A./N.V. is active in the field of logistics in the widest sense. Its subsidiary BELPOWER aims to become a key player in the production and marketing of renewable energy in Europe. In November 2005, the REIBEL shares were listed on the Euronext Brussels Free Market at an issue price of EUR 3.81.
